

Figure 1 is a schematic representation of the experimental design. It shows a flowchart of the process from subject selection to the final calculation of mean similarity scores. The steps are as follows:

- Selection of 1000 subjects
- Random assignment to 500 pairs
- Presentation of stimuli (A and B)
- Judgment of similarity (Yes/No)
- Calculation of similarity scores
- Calculation of mean similarity scores
- Calculation of mean similarity scores for each pair
- Calculation of mean similarity scores for each pair
- Calculation of mean similarity scores for each pair
- Calculation of mean similarity scores for each pair
